

Our Website!

We have been working hard over the past few months on a new and improved website and we are pleased to announce that it is officially live.

What's New?

- Revised and easily accessible information on all of our damping systems
- An added section on motion control for floors
- New service pages for building monitoring, pool sloshing and floor vibration
- Revised and updated links, lots of new project images, an

Head over to motiveering.ca and take a tour.

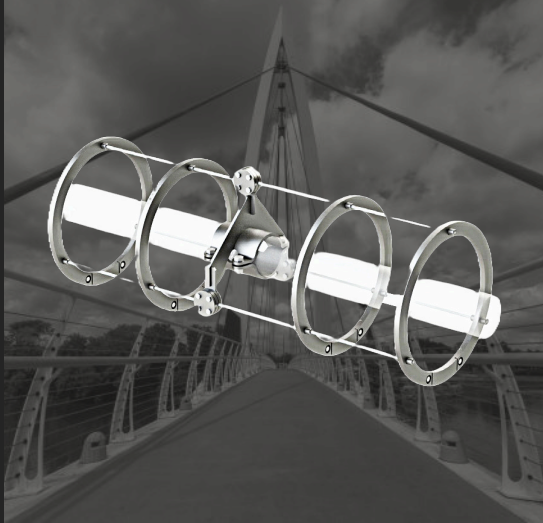

New Video Series.

September sees the launch of the first episode in our new Conversations in Motion video series. This new series comes on the heels of our popular 6-episode Damping Explained series where our team of scientist engineers presented some basic knowledge of how dampers work along with options for damping solutions.

Conversations in Motion will feature short but informative clips exploring some of Motioneering's unique services, delivered in a relaxed, conversational format.

Watch now on our You Tube channel.

New Cable Damper Design.

Motioneering is pleased to introduce a new modular damping system for bridges. Its novel configuration of steel rings fixed to wire ropes makes for an aesthetically pleasing damping solution that can be mounted around existing stay and/or hanger cables. The damper's modular design and standardized connections allow for simple installation on site.

Ask us for a Cable Damper spec sheet

Yes, we do Air Traffic Control Towers.

It's true, Motioneering designs tuned mass dampers for Air Traffic Control Towers. Our dampers are able to control the lateral and torsional motions of a tower, allowing its occupants to work without the slightest distraction which, as you can imagine is pretty crucial when you're guiding airplanes around taxiways and on and off runways.
